

Table View Search

Trinh Minh Cuong
cuong@techmaster.vn

CUSTOMIZE TABLE VIEW CELL

```

- (UITableViewCell *)tableView:(UITableView *)tableView
cellForRowAtIndexPath:(NSIndexPath *)indexPath {

    UITableViewCell *cell = [tableView
dequeueReusableCellWithIdentifier:@"MyIdentifier"];
    if (cell == nil) {
        cell = [[[UITableViewCell alloc] initWithStyle:UITableViewCellStyleSubtitle
reuseIdentifier:@"MyIdentifier"] autorelease];
        cell.selectionStyle = UITableViewCellSelectionStyleNone;
    }

    NSDictionary *item = (NSDictionary *)[self.content objectAtIndex:indexPath.row];

    cell.textLabel.text = [item objectForKey:@"Title"];
    cell.detailTextLabel.text = [item objectForKey:@"subTitle"];

    NSString *path = [[NSBundle mainBundle] pathForResource:[item
objectForKey:@"imageKey"] ofType:@"png"];
    UIImage *theImage = [UIImage imageWithContentsOfFile:path];

    cell.imageView.image = theImage;

    return cell;
}

```

```
result.accessoryType = UITableViewCellAccessoryDetailDisclosureButton;
```

```
typedef enum {  
    UITableViewCellAccessoryNone,  
    UITableViewCellAccessoryDisclosureIndicator,  
    UITableViewCellAccessoryDetailDisclosureButton,  
    UITableViewCellAccessoryCheckmark  
} UITableViewCellAccessoryType;
```

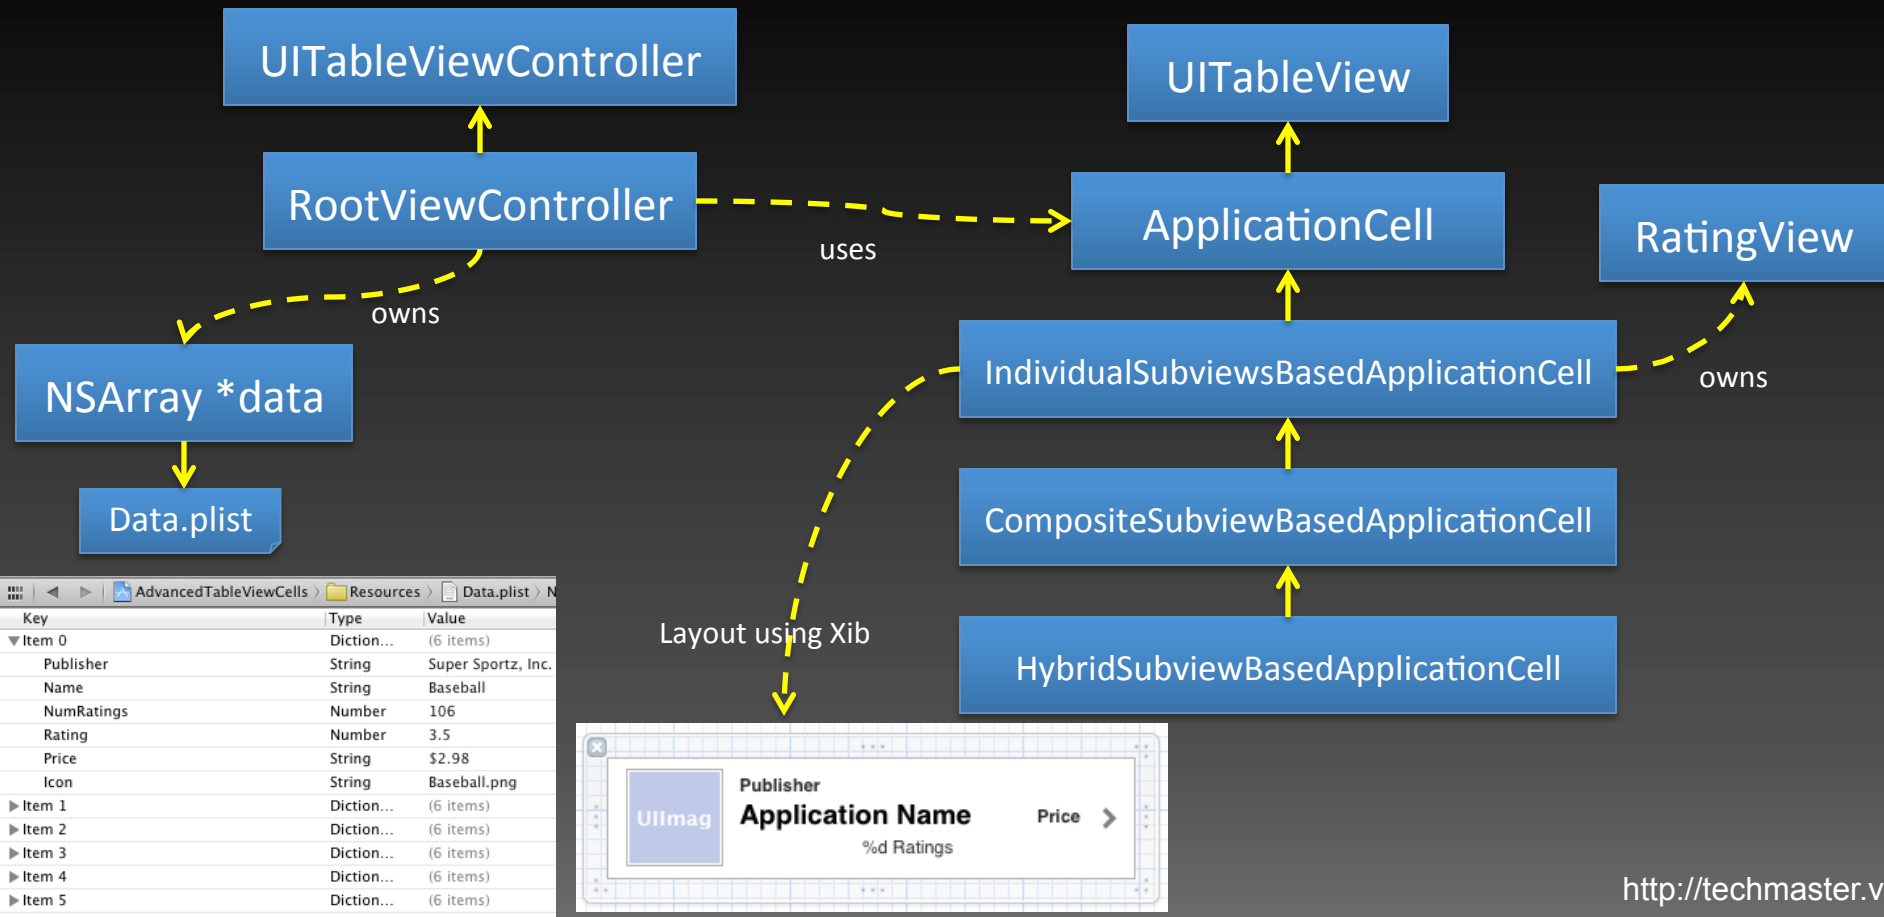

```
result.textLabel.text = [NSString stringWithFormat:@"Section %ld, Cell %ld",  
                        (long)indexPath.section,  
                        (long)indexPath.row];  
  
UIButton *button = [UIButton buttonWithType:UIButtonTypeRoundedRect];  
button.frame = CGRectMake(0.0f, 0.0f, 150.0f, 25.0f);  
  
[button setTitle:@"Expand"  
           forState:UIControlStateNormal];  
  
[button addTarget:self  
           action:@selector(performExpand:)  
           forControlEvents:UIControlEventTouchUpInside];  
  
result.accessoryView = button;  
  
return result;
```

ADVANCED CUSTOMED TABLE VIEW CELL

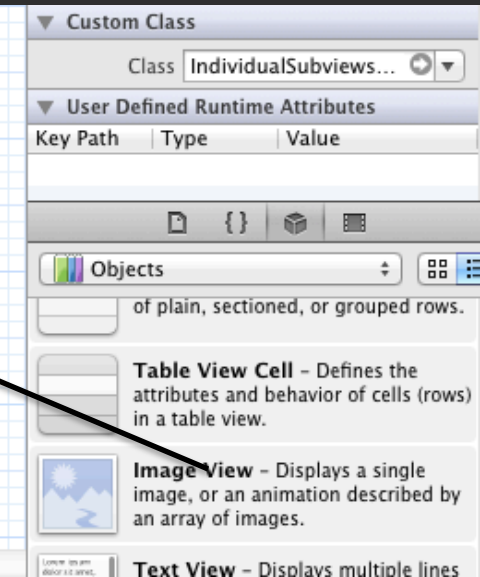

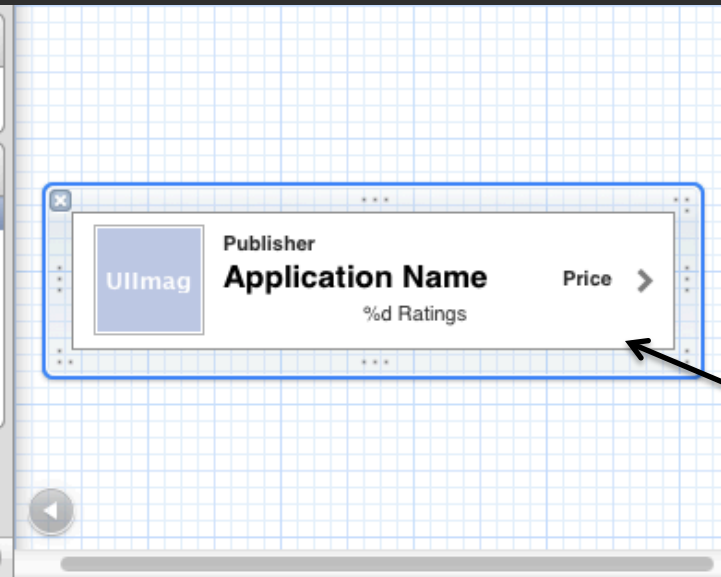

Advanced Customed Table View Cell

```
[self.cellNib instantiateWithOwner:self options:nil];  
cell = tmpCell;  
self.tmpCell = nil;
```

- 1- Load Nib
- 2- Associate loaded Nib with tmpCell
- 3- Assign tmpCell to each cell

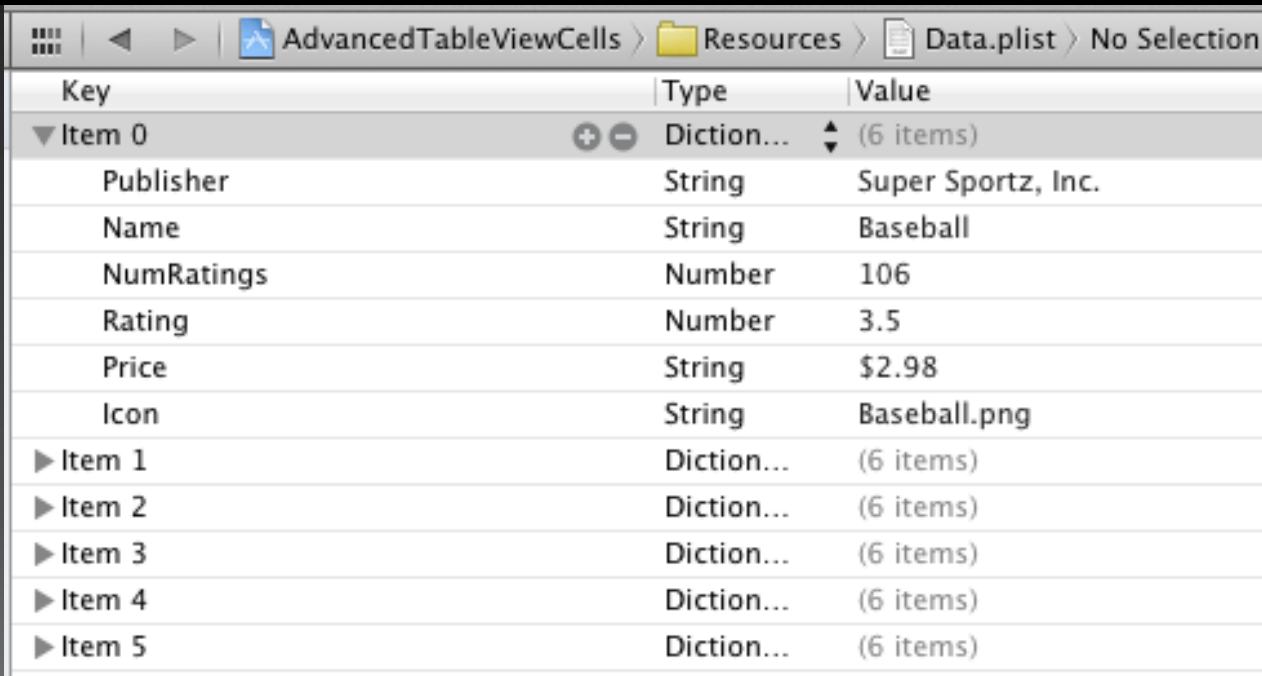

HOW TO LOAD DATA FROM PLIST

Load data from plist to model

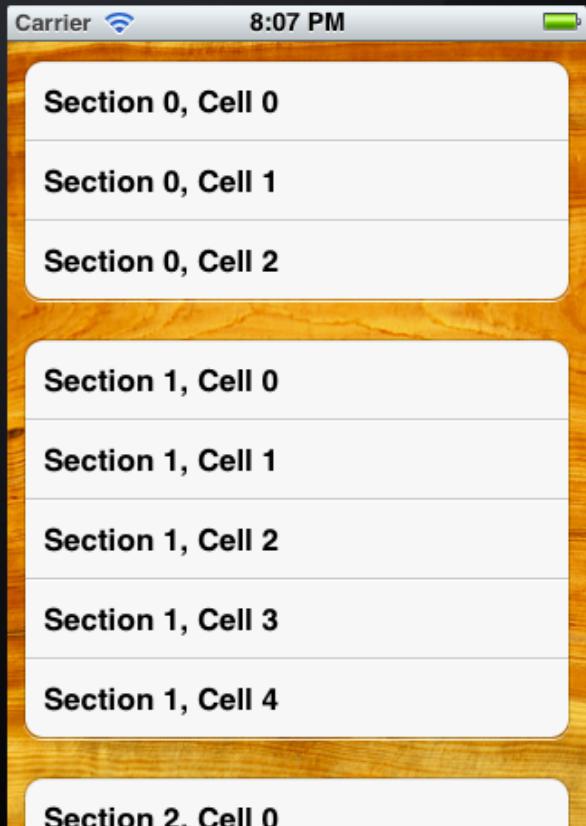

```
NSString *dataPath = [[NSBundle mainBundle]  
pathForResource:@"Data" ofType:@"plist"];
```

```
self.data = [NSArray arrayWithContentsOfFile:dataPath];
```

The screenshot shows the Xcode interface with the 'Data.plist' file open. The table below represents the data loaded from the plist.

Key	Type	Value
▼ Item 0	Diction...	(6 items)
Publisher	String	Super Sportz, Inc.
Name	String	Baseball
NumRatings	Number	106
Rating	Number	3.5
Price	String	\$2.98
Icon	String	Baseball.png
► Item 1	Diction...	(6 items)
► Item 2	Diction...	(6 items)
► Item 3	Diction...	(6 items)
► Item 4	Diction...	(6 items)
► Item 5	Diction...	(6 items)

Customize background

```
UIImage *backgroundImage = [UIImage imageNamed:@"woodgrain.jpg"];
```

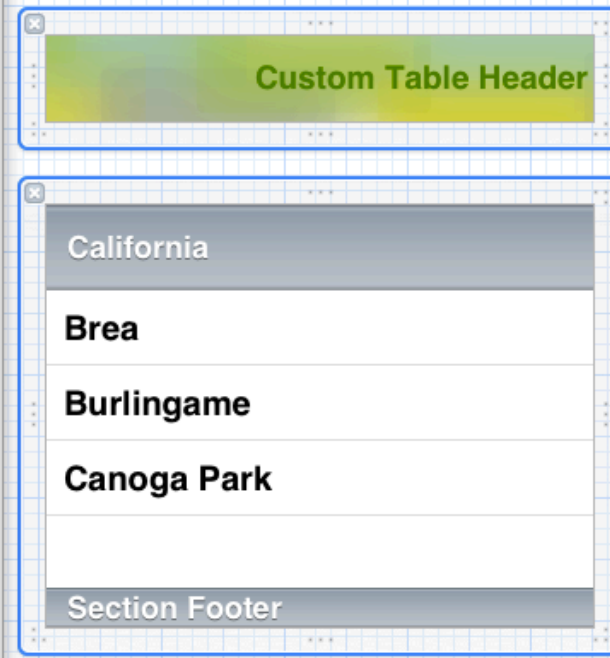

```
self.myTableView.backgroundView = [[UIImageView alloc]  
initWithImage:backgroundImage];
```

Custom header section

Header and Footer of Sections

- viewForHeaderInSection:
- viewForFooterInSection:
- heightForHeaderInSection:
- heightForFooterInSection:

Custom Table Header Example	
Custom Table Header	
Objective-C	
ActionScript	
Java	
C	
BASIC	

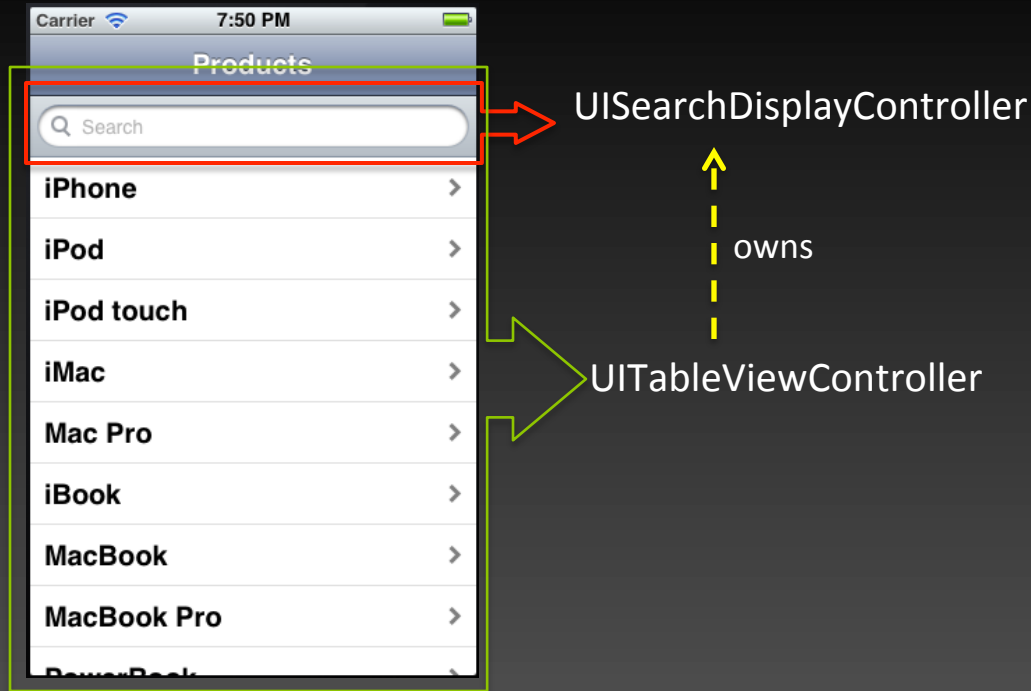

```
@interface RootViewController : UITableViewController {  
    IBOutlet UIView *headerView;  
    NSArray *tableData;  
}
```

```
@property (nonatomic, retain) UIView *headerView;  
@property (nonatomic, retain) NSArray *tableData;
```

SEARCH IN TABLE VIEW

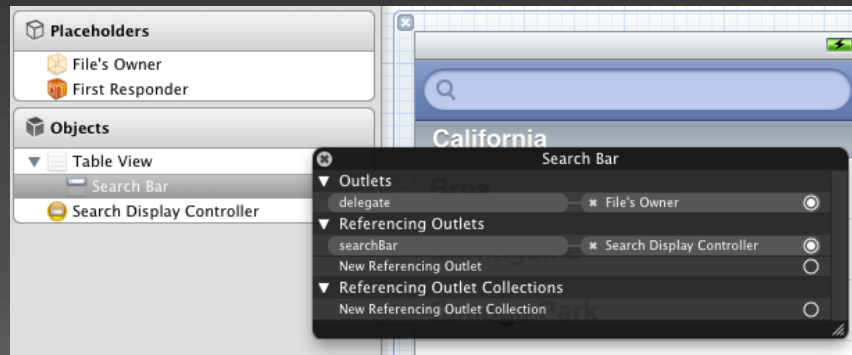

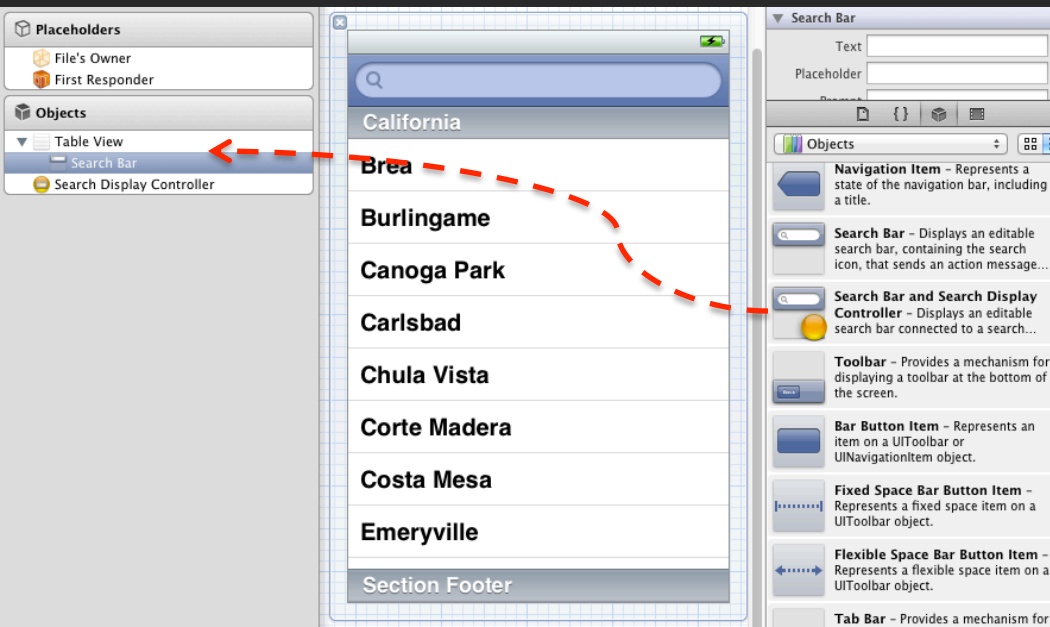

Search for UITableViewController

In fact, `UITableViewController` inherits `UIViewController`.
`UIViewController` has pointer to `UISearchDisplayController`

Steps

- In IB, drag SearchBar and Display Controller to TableView
- Make ViewController to conform UISearchBarDelegate, UISearchBarDelegate

UISearchBar Class Reference

Inherits from	UIView : UIResponder : NSObject
Conforms to	NSCoding (UIView) UIAppearance (UIView) UIAppearanceContainer (UIView) NSObject (NSObject)
Framework	/System/Library/Frameworks/ UIKit.framework
Availability	Available in iOS 2.0 and later.
Declared in	UISearchBar.h

UISearchDisplayController Class Reference

Inherits from	NSObject
Conforms to	NSObject (NSObject)
Framework	/System/Library/Frameworks/ UIKit.framework
Availability	Available in iOS 3.0 and later.
Declared in	UISearchDisplayController.h
Related sample code	TableSearch

A search display controller manages display of **a search bar** and **a table view that displays the results of a search of data managed by another view controller**.

You initialize a search display controller with a search bar and a view controller responsible for managing the original content to be searched.

When the user starts a search, the search display controller is responsible for superimposing the search interface over the original view controller's view and showing the search results.

UISearchDisplayDelegate

Search State Change

- searchDisplayControllerWillBeginSearch:
- searchDisplayControllerDidBeginSearch:
- searchDisplayControllerWillEndSearch:
- searchDisplayControllerDidEndSearch:

Loading and Unloading the Table View

- searchDisplayController:didLoadSearchResultsTableView:
- searchDisplayController:willUnloadSearchResultsTableView:

Showing and Hiding the Table View

- searchDisplayController:willShowSearchResultsTableView:
- searchDisplayController:didShowSearchResultsTableView:
- searchDisplayController:willHideSearchResultsTableView:
- searchDisplayController:didHideSearchResultsTableView:

Responding to Changes in Search Criteria

- searchDisplayController:shouldReloadTableForSearchString:
- searchDisplayController:shouldReloadTableForSearchScope:

Insert, Delete, Move Rows & Selections

Homework

- Create weather forecast GUI like this
- Create searchable table view of product list: product photo thumbnail, product name, short description, price and rating

Table Badget

- <http://www.tuaw.com/2010/01/07/iphone-devsugar-simple-table-badges/>
